

## Embedding Content

### First Option:

- In Site Manager, click on the area of the page you want to embed content.
- Click **View HTML** (just above the Save button)
- The area you selected will be highlighted
- Paste the embed code into the area highlighted
- **Apply**
- **Ok**
- **Save**
- In the Public View, check to see if your item embedded properly

**Second Option:** If first option did not work. We have used this option with Animoto and MagToo

You are able to workaround this by doing the following:

- Copy the provided HTML code from the website
- Paste the code into a new **Notepad** document
- Save the text document with a .html file extension
  - File, Save As
  - In File Name: type the file name in all lowercase with “.html” at the end
  - Save
- Upload the saved .html file to Files & Folders in the Section Workspace
- Click the **URL** button to the right of the uploaded .html file and copy to clipboard
- Within the Editor for the page in question, place your cursor where you want to embed content, click the Open **Toolbox** icon
- Select **Active Blocks**, then select **Simple Embed** and **Next**
- Paste the .html files URL in the field and click **Insert**
- **Save**
