December, 2018

Aaron B. Clevenson, Observatory Director, Insperity Observatory

This document tells you what objects are visible this next month for many of the Astronomical League Clubs. If you are working on one of the more advanced club, then I assume that you are also probably tracking where your objects are all the time. I concentrate on the more common and starter level clubs.

Other Clubs (continued)

Planetary – These are the tasks that can be done this month:

Mercury, Venus, Ceres, and Jupiter are not visible in the evening sky.

Sun – Any clear day is a good time to get those sunspots. Sunset is 1723 at mid-month.

Moon: The Maria requirement can be done any time the moon is visible. Look after 12/14 and before 12/29 for the best views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 12/13 and 12/14.

The Scarps requirement is best done on 12/15.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid. See above to identify the bright ones this month.

Mars is in Aquarius and sets at 2352 CST mid-month.

Saturn is in Sagittarius and sets at 1827 CST at mid-month

Uranus is in Pisces and sets at 0256 CST at mid-month.

Neptune is in Aquarius and sets at 2326 CST at mid-month.

Pluto, the Dwarf Planet, is in Sagittarius and sets at 1914 CST at mid-month.
