

What's Up, Doc? †

August, 2017

Dr. Aaron B. Clevenson, Observatory Director, Insuperity Observatory

This document presents those objects are visible this next month for many Astronomical League Observing Programs. If you are working on a more advanced program, I assume you are tracking where your objects are all the time. It concentrates on the common and starter level programs. This is based on 9 PM CDT.

The Great American Solar Eclipse

Totality passes through the middle of the United States, from Oregon to South Carolina on August 21, 2017 – mid-day. A great place to start your web-search: <https://eclipse.gsfc.nasa.gov/eclipse.html>

Other Clubs (of the Solar System)

Solar System – These are the tasks that can be done this month:

Sun – Any clear day is a good time to get those sunspots.

Sunset is 2000 mid-month.

Venus and Mars are too close to the Sun or is a morning object.

Moon:

The Maria requirement can be done any time the moon is visible. Look before 8/14 and after 8/28 for the fullest views.

The Highlands requirement can be done at the same time.

The Crater Ages requirement is best done on 8/27 or 8/28.

The Scarps requirement is best done on 8/129.

Occultations occur all the time, the bright ones can be found on the internet. Objects disappear on the East side of the moon.

Asteroids – Course Plotting and Measuring Movement requirements can be done at any time on any asteroid.

Mercury is in Sextans and sets at 2040 mid-month.

Ceres is in Aquarius and rises at 2049 mid-month.

Jupiter is in Virgo and sets 2246 mid-month.

Saturn is in Ophiuchus and is up all evening mid-month. All requirements can be done when Saturn is visible: markings, moons, etc.

Uranus is in Pisces and rises at 2305 mid-month.

Neptune is in Aquarius and rises at 2100 mid-month.

Pluto is in Sagittarius and is up all evening mid-month.
