

# AP Calculus BC Summer Refresher

**WHO:** ALL students entering AP Calculus BC in the Fall of 2020

**WHAT:** A three-day workshop to review the calculus learned in Precalculus BC

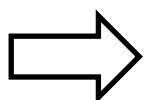

**WHEN:** Monday, July 27 through Wednesday, July 30  
9:00 – 11:30AM each day

**WHERE:** KHS Room 4112

**WHY:** AP Calculus BC begins where Precalculus BC left off in May. So it is expected that you KNOW the basics of Limits, Continuity, and Derivatives. The summer months seem to suck all of that information out of many students' brains. This refresher is a remedy for that!

In addition, students who took Precalculus AB rather than BC need to learn this material for the first time. (It is expected that EVERY student entering AP Calculus BC knows this material.) This refresher is especially important for these students!

We will also review trigonometric functions and inverse trigonometric functions. You need to KNOW those as well. Trig functions are in EVERYTHING we do.

You **must** register by emailing me at [barbara.murray@humbleisd.net](mailto:barbara.murray@humbleisd.net).

State your name, and whether you were in Precalculus AB or BC this year.

Deadline to register is Wednesday, July 22.

What to bring:

Bring your AP Calculus BC Summer Packet (found on my website), a pencil, eraser, paper/notebook, and graphing calculator. Feel free to bring your breakfast/snack and a drink as well. Dress comfortably.

If you can't make this refresher, be sure to complete the AP Calculus BC Summer Packet on your own. You can find it and the solutions on my Staff Site on the KHS website. Have a great summer and I'll see you in July!
